Spin Scooters at CSUMB

Team name: "Big Guns"

By: Ethan Herndon, Claudio Vertemara, Mustafa Memon

Description

As the final project for CST 336, we created a sample website for Spin Scooters where users are able to create an account, login, edit their account, search locations using 3 different fields, and book a fake trip. Admins are able to edit the database where all the site info is located, to remove accounts, edit locations, and edit trip prices.

Team Contribution

Ethan:

Weather API/Project lead and structure

Claudio:

Backend, Login/Authorization, Database

Mustafa:

Frontend, Pixabay API

We documented our work here:
https://github.com/HerndonE/CST-336-Final-via-Spin-Scooters/blob/master/Notes.txt

Challenges

Connecting database to Heroku.

Index issue when deleting something from database table & then adding to that table.

Mild redirection issues.
